PROFILE SUMMARY

Innovative and results-driven Software Engineer and Systems Developer with hands-on experience building scalable web, mobile, and distributed systems across the full development stack. Proficient in frontend, backend, mobile, and DevOps engineering — from crafting responsive UIs and React Native apps to designing system architectures and automating cloud deployment pipelines. An active tech writer sharing insights on Medium and Substack, and a skilled collaborator and community mentor with a proven record of leading projects and developer communities.

TECHNICAL SKILLS

Frontend: JavaScript · TypeScript · React · Next.js · Angular

Mobile: React Native · Cross-platform iOS & Android Development

Backend: Node.js · Express · Python · FastAPI · Django · Golang · Supabase · Firebase

Databases: PostgreSQL · MongoDB · Supabase · Firebase · SQL

DevOps: Docker · Kubernetes (K8s) · AWS · CI/CD · GitHub Actions · Vercel · Render

Tools & Design: Figma · Material UI · Git · REST APIs

Core Strengths: Team Leadership · Deadline Adherence · Attention to Detail · Communication

PROFESSIONAL EXPERIENCE

Co-Lead – Web Development Club | Meru University

March 2025 – Present

- Spearheaded beginner workshops on HTML, CSS, and JavaScript for incoming club members
- Led a team in building a full-stack event tracker using React and Firebase
- Organized weekly coding sessions and mid-month project showcases to build a strong dev culture
- Mentored members in Git workflows, project architecture, and frontend development best practices

Freelance Software Engineer | Remote

August 2024 – Present

- Designed and built custom web and mobile applications using React, Next.js, React Native, and Tailwind CSS
- Architected backend services and RESTful APIs using Node.js, Express, and Supabase
- Implemented DevOps pipelines with Docker, CI/CD workflows, and cloud deployments on AWS, Vercel, and Render
- Implemented authentication flows, role-based access, and real-time data features
- Managed full deployment pipelines on platforms including Vercel and Render
- Writes technical articles about software engineering, DevOps, and systems design on Medium and Substack

PERSONAL PROJECTS

1. Custom Load Balancer – Go

A production-ready HTTP/HTTPS load balancer written in Go that efficiently distributes traffic across multiple backend servers. It supports round-robin and weighted round-robin routing, automatic health checks, sticky sessions, TLS/HTTPS, JSON metrics, structured logging, and graceful shutdown for reliable operation in production environments.

- GitHub: <https://github.com/nianod/Custom-Load-Balancer>

2. Rental Management System – Next.js · PostgreSQL · Supabase

A comprehensive full-stack rental management platform built with Next.js, designed to digitize and streamline the day-to-day operations between landlords and tenants. The system centralizes property management, tenant records, rent tracking, and communication into a single, intuitive interface — built on a modern, scalable architecture.

- Built with Next.js App Router for server-side rendering and optimized page performance
- Supabase powers the backend with PostgreSQL database, authentication, and real-time updates
- Features tenant onboarding, rent payment tracking, maintenance request management, and landlord dashboards
- Designed with a clean, responsive UI for seamless use across desktop and mobile devices
- GitHub: <https://github.com/nianod/Rental-management-system>

3. Help Hub – Community Assistance Platform – React · Tailwind CSS · Supabase

A web platform that connects individuals seeking help with volunteers in their neighborhood or campus.

- Role-based access (Helper / Help Seeker), user dashboards, and real-time post management
- Built with React, Tailwind CSS, and Supabase for authentication and live updates
- GitHub: <https://github.com/nianod/Help-board-hub>

4. API Marketplace for Developers – React · Node.js · Express · MongoDB

An online marketplace for developers to explore, test, and integrate third-party APIs into their projects.

- JWT-based authentication, API listing, categorized endpoints, and documentation management
- Built with React frontend, Node.js/Express backend, and Python utilities on MongoDB
- GitHub: <https://github.com/nianod/Developers-API-Marketplace>

EDUCATION & CERTIFICATIONS

Bachelor of Business Information Technology (BBIT) | Meru University of Science and Technology

2024 – Ongoing

Front-End Development – The Complete 2024 Web Development Bootcamp

2024 – 2025

React.js Framework – React Front to Back Course

Feb 2024 – Ongoing

Software Development – CodeSpace Online Bootcamp

2024 – Present

Hashgraph Developer Course – The Hashgraph Association

Completed Oct 2025

APISEC University – API Authentication Certificate

Completed Nov 2025
